Postadresse: Postboks 1026 Blindern, 0318 Oslo
www.recx.no

Hourly/daily rates without operator cost

	User Category 1	User Category 2
Routine instrument	600 per sample	1000 per sample#
Powder diffraction on another specialized Instrument	1000 per hour 10000 per day	1500 per hour 15000 per day
Thin film studies	1000 per hour 10000 per day	1500 per hour 15000 per day
SAXS	1000 per hour 10000 per day	1500 per hour 15000 per day
Single Crystal	3000 per data set	6000 per data set

Charges only for data collection. Additional Charges will apply for preparing samples and providing any analysis.

Prices for service at RECX for industry

1. Qualitative phase analysis.
2. Phase identification.
3. Quantitative phase analysis (Rietveld Refinement).
4. Determination of amorphous content.
5. Particle size determination.
6. Any other analysis can be requested after a discussion.

Per hour **1600 NOK** will be charged for such analysis. For example, if a quantitative analysis of a sample takes two hours including the sample preparation then the price would be $(2 \times 1600 + 1000) = 4200$ NOK

Operator cost and consumables.

Operator costs will be charged at a rate of 750 NOK/hour for user category 1. Costs for category 2 is 1600 NOK/hour. These costs apply when a RECX operator is required to perform or assist during the experiments.

RECX will bear the cost of Liq-N₂ and other Gases used for measurements.

Training

Basic training in the routine instrument is free for user category 1, for the other instruments there is a fee applicable. For each instrument the training fee will be (in NOK):

	Master students	Internal users	User Category 2
Price per training for one type of instrument	2000	5000	8000

The prices apply for 2024.

Price List will be updated each year.
